

CUSTOMER SUCCESS CASE STUDY

HOW A GLOBAL SUPPLY CHAIN CONSULTANCY CONNECTED PAID MEDIA TO A \$55M+ PIPELINE ENGINE

MOVING FROM CHANNEL ACTIVITY TO AN INTEGRATED DEMAND-GENERATION SYSTEM ACROSS PAID, CONTENT, EVENTS, SEO AND SALES FOLLOW-UP

Organisation	Global supply chain consultancy
Period	September 2023 - April 2026
Role / scope	Senior Marketing Manager Paid media, demand generation and revenue alignment
Audience	CMOs, marketing leaders, CEOs and hiring managers

EXECUTIVE OUTCOME

The work connected paid campaigns with content, events, website and SEO, marketing automation, sales follow-up and pipeline reporting. The documented practice-level outcome was \$55M+ in sales-qualified pipeline generated by the broader demand-generation framework, alongside an 18% year-over-year increase in attributed revenue across key practices. The customer-success story is the shift from treating paid media as an isolated acquisition channel to treating it as one component of a measurable demand engine. Paid-media-only contribution remains a validation item.

METRIC REGISTER AND PUBLICATION STATUS

Each metric is either documented in the supplied profile/project material or marked as an illustrative validation item. Validation items are prompts for recovering the original baseline, denominator, source and attribution; they are not public claims.

Metric	Value	Definition	Status / publication note
Sales-qualified pipeline	\$55M+	Pipeline generated by the broader automated demand-generation framework.	Documented practice-level outcome; paid-only attribution needs confirmation.
Attributed revenue growth	18% YoY	Year-over-year increase in attributed revenue across key practices.	Documented practice-level outcome.
Paid-only pipeline	Validation required	Pipeline directly attributable to paid media under agreed rules.	Illustrative validation item - not a claim.

BUSINESS CONTEXT AND CUSTOMER CHALLENGE

A prospect may discover a point of view through an advertisement, attend an event, read a capability article, speak with a consultant and return through branded search weeks later. If those interactions are managed as separate activities, the business sees fragments instead of a demand journey.

The challenge was to make the fragments work together. Paid media needed to create qualified attention, content needed to deepen it, events needed to create human engagement, the website needed to convert intent and sales needed enough context to follow up intelligently.

STRATEGIC DIAGNOSIS

Performance was being limited by handoffs. Campaigns could run efficiently in a platform while still producing weak commercial outcomes if the landing experience, qualification logic or sales response was disconnected.

The solution was to design backwards from the desired commercial conversation: identify the audience and problem, create a useful narrative, capture the signal, route it into follow-up and report on progression.

CAMPAIGN SUCCESS MATRIX

The matrix makes the operating logic visible: business need, strategic move, execution system and success signal. It is deliberately designed for executive readers who want to understand how the work created a repeatable capability, not only a headline result.

Business need	Strategic move	Execution system	Success signal
Qualified attention	reach relevant business audiences	Paid search/social, audience planning and message testing	Higher-quality engagement entering owned channels
Nurture	give prospects reasons to continue	Content, events, email and marketing automation	Engagement and qualification signals
Conversion	turn interest into a usable sales handoff	CRM routing, follow-up and pipeline reporting	Sales-qualified pipeline
Governance	protect attribution credibility	Definitions, source systems and review cadence	\$55M+ broader framework outcome

APPROACH AND EXECUTION

1. 1. START WITH THE DEMAND JOURNEY

The first move was reach relevant business audiences. Campaigns were planned around audience, problem, stage and next action rather than a platform checklist. Nikhil's role was to connect the commercial objective with the practical work required to deliver it. That meant making the problem explicit, choosing a workable intervention and ensuring that the team could see what would happen next. In a complex marketing environment, this clarity is valuable because it prevents activity from becoming disconnected from the outcome.

The second part was operational discipline. Campaigns were planned around audience, problem, stage and next action rather than a platform checklist. The work was reviewed through the lens of qualified attention, so decisions could be made with context rather than by chasing an isolated channel metric. This helped preserve the customer experience while improving the organisation's ability to execute, learn and adapt.

This move also created a reusable lesson. Higher-quality engagement entering owned channels The result should be interpreted as evidence of the system working, not as proof that one tactic alone created every business outcome. That distinction makes the story more credible for senior readers and gives future teams a clearer way to reproduce the useful part of the work.

2. 2. INTEGRATE PAID, OWNED AND EARNED ACTIVITY

The first move was give prospects reasons to continue. Paid, content, events, SEO and website journeys were connected so learning could travel across channels. Nikhil's role was to connect the commercial objective with the practical work required to deliver it. That meant making the problem explicit, choosing a workable intervention and ensuring that the team could see what would happen next. In a complex marketing environment, this clarity is valuable because it prevents activity from becoming disconnected from the outcome.

The second part was operational discipline. Paid, content, events, SEO and website journeys were connected so learning could travel across channels. The work was reviewed through the lens of nurture, so decisions could be made with context rather than by chasing an isolated channel metric. This helped preserve the customer experience while improving the organisation's ability to execute, learn and adapt.

This move also created a reusable lesson. Engagement and qualification signals The result should be interpreted as evidence of the system working, not as proof that one tactic alone created every business outcome. That distinction makes the story more credible for senior readers and gives future teams a clearer way to reproduce the useful part of the work.

3. 3. IMPROVE THE HANDOFF

The first move was turn interest into a usable sales handoff. Captured signals were connected with context so sales could understand what the prospect had engaged with and why the next action mattered. Nikhil's role was to connect the commercial objective with the practical work required to deliver it. That meant making the problem explicit, choosing a workable intervention and ensuring that the team could see what would happen next. In a complex marketing environment, this clarity is valuable because it prevents activity from becoming disconnected from the outcome.

The second part was operational discipline. Captured signals were connected with context so sales could understand what the prospect had engaged with and why the next action mattered. The work was reviewed through the lens of conversion, so decisions could be made with context rather than by chasing an isolated channel metric. This helped preserve the customer experience while improving the organisation's ability to execute, learn and adapt.

This move also created a reusable lesson. Sales-qualified pipeline The result should be interpreted as evidence of the system working, not as proof that one tactic alone created every business outcome. That distinction makes the story more credible for senior readers and gives future teams a clearer way to reproduce the useful part of the work.

4. 4. REPORT AT THE RIGHT LEVEL

The first move was protect attribution credibility. Reporting distinguished channel delivery, funnel movement, qualification, pipeline and revenue instead of collapsing them into one number. Nikhil's role was to connect the commercial objective with the practical work required to deliver it. That meant making the problem explicit, choosing a workable intervention and ensuring that the team could see what would happen next. In a complex marketing environment, this clarity is valuable because it prevents activity from becoming disconnected from the outcome.

The second part was operational discipline. Reporting distinguished channel delivery, funnel movement, qualification, pipeline and revenue instead of collapsing them into one number. The work was reviewed through the lens of governance, so decisions could be made with context rather than by chasing an isolated channel metric. This helped preserve the customer experience while improving the organisation's ability to execute, learn and adapt.

This move also created a reusable lesson. \$55M+ broader framework outcome The result should be interpreted as evidence of the system working, not as proof that one tactic alone created every business outcome. That distinction makes the story more credible for senior readers and gives future teams a clearer way to reproduce the useful part of the work.

MEASUREMENT, ATTRIBUTION AND OPERATING DISCIPLINE

Platform metrics helped optimise delivery, conversion metrics diagnosed the experience, qualification metrics assessed lead quality and pipeline/revenue metrics assessed commercial value. The \$55M+ and 18% figures are documented at practice level. Confirm the definitions, period and attribution model before publication.

A senior reader should be able to tell which evidence proves execution, which evidence proves engagement and which evidence proves commercial impact. The case therefore keeps metric definitions close to the story. Where the supplied material documents a practice-level or portfolio-level result, the narrative says so. Where a project-specific number is unavailable, the document names the recovery task instead of manufacturing precision.

BUSINESS IMPACT AND CUSTOMER-SUCCESS INTERPRETATION

The organisation gained a more complete demand-generation operating model. Paid media became more valuable because it was connected to experiences that could educate, qualify and progress a prospect. Content and events became more measurable because they were tied to journeys and follow-up.

The customer-success outcome was capability compounding. A campaign could create learning for the next campaign, sales insight could improve content and engagement signals could inform account prioritisation. That is what makes an integrated system scalable.

WHAT THIS CASE DEMONSTRATES TO AN EXECUTIVE READER

- Paid media is strongest when post-click experience and sales handoff are designed with the media plan.
- Pipeline numbers need scope and attribution labels.
- Executive reporting should separate delivery, funnel, qualification and revenue metrics.
- Integrated campaigns create a learning loop across channels.
