

CUSTOMER SUCCESS CASE STUDY

How a Global Supply Chain Consultancy Connected Website Experience to Demand Capture

Improving the bridge between market narrative, SEO, landing experiences and commercial conversion

Organisation	Global supply chain consultancy
Period	September 2023 - April 2026
Role / scope	Senior Marketing Manager Website, content, SEO and conversion journeys
Audience	CMOs, marketing leaders, CEOs and hiring managers

Executive outcome

The website work connected consulting propositions, content journeys, SEO activity, landing experiences and demand capture. The supplied material documents a 45% increase in brand visibility and an 18% year-over-year increase in attributed revenue across key practices; those are practice-level outcomes, not website-only claims. The customer-success story is the creation of a clearer path from a prospect's initial question to a relevant business conversation. Website-specific conversion improvement remains a validation item.

Metric register and publication status

Each metric is either documented in the supplied profile/project material or marked as an illustrative validation item. Validation items are prompts for recovering the original baseline, denominator, source and attribution; they are not public claims.

Metric	Value	Definition	Status / publication note
Brand visibility	+45%	Increase in reported brand visibility across relevant practices.	Documented practice-level outcome.
Attributed revenue	+18% YoY	Year-over-year increase in attributed revenue across key practices.	Documented practice-level outcome.
Website conversion rate	Validation required	Percentage of relevant visitors completing a defined demand-capture action.	Illustrative validation item - not a claim.

Business context and customer challenge

A consulting website must help a visitor recognise a problem, understand credibility, find evidence and identify a proportionate next step. In complex B2B categories, several people in the buying group may use the site, each looking for different proof.

The challenge was to create stronger integration between the market narrative and the conversion path. A page could attract traffic and still fail if the proposition was unclear, while a landing page could convert and still create weak demand if the audience or offer was poorly matched.

Strategic diagnosis

Website performance could not be separated from the story being told. Broad capability language made it harder for a visitor to locate the business problem that mattered to them.

The response was to align each journey around audience, problem statement, proof, supporting content and conversion action, then prioritise the improvements that removed the greatest understanding or action friction.

Campaign success matrix

The matrix makes the operating logic visible: business need, strategic move, execution system and success signal. It is deliberately designed for executive readers who want to understand how the work created a repeatable capability, not only a headline result.

Business need	Strategic move	Execution system	Success signal
Discoverability	help priority audiences find relevant expertise	SEO, content themes and practice architecture	Improved visibility
Clarity	make complex consulting value easier to understand	Problem-led messaging and page hierarchy	Lower interpretation burden
Conversion	create a proportionate next step	Landing pages, forms, CTAs and testing	Demand-capture actions
Learning	make website activity commercially useful	Analytics, CRM context and follow-up	Verified conversion improvement when available

Approach and execution

1. 1. Reframe around buyer questions

The first move was help priority audiences find relevant expertise. The site was reviewed through buyer questions rather than the internal organisation chart, connecting practice pages with problem-led content. Nikhil's role was to connect the commercial objective with the practical work required to deliver it. That meant making the problem explicit, choosing a workable intervention and ensuring that the team could see what would happen next. In a complex marketing environment, this clarity is valuable because it prevents activity from becoming disconnected from the outcome.

The second part was operational discipline. The site was reviewed through buyer questions rather than the internal organisation chart, connecting practice pages with problem-led content. The work was reviewed through the lens of discoverability, so decisions could be made with context rather than by chasing an isolated channel metric. This helped preserve the customer experience while improving the organisation's ability to execute, learn and adapt.

This move also created a reusable lesson. Improved visibility The result should be interpreted as evidence of the system working, not as proof that one tactic alone created every business outcome. That distinction makes the story more credible for senior readers and gives future teams a clearer way to reproduce the useful part of the work.

2. 2. Build a connected content path

The first move was make complex consulting value easier to understand. Visitors could move from discovery to deeper content, proof, an event or a conversation according to their readiness. Nikhil's role was to connect the commercial objective with the practical work required to deliver it. That meant making the problem explicit, choosing a workable intervention and ensuring that the team could see what would happen next. In a complex marketing environment, this clarity is valuable because it prevents activity from becoming disconnected from the outcome.

The second part was operational discipline. Visitors could move from discovery to deeper content, proof, an event or a conversation according to their readiness. The work was reviewed through the lens of clarity, so decisions could be

made with context rather than by chasing an isolated channel metric. This helped preserve the customer experience while improving the organisation's ability to execute, learn and adapt.

This move also created a reusable lesson. Lower interpretation burden The result should be interpreted as evidence of the system working, not as proof that one tactic alone created every business outcome. That distinction makes the story more credible for senior readers and gives future teams a clearer way to reproduce the useful part of the work.

3. 3. Optimise conversion paths

The first move was create a proportionate next step. The work addressed message match, hierarchy, proof, calls to action, form friction and the relationship between campaign promise and page experience. Nikhil's role was to connect the commercial objective with the practical work required to deliver it. That meant making the problem explicit, choosing a workable intervention and ensuring that the team could see what would happen next. In a complex marketing environment, this clarity is valuable because it prevents activity from becoming disconnected from the outcome.

The second part was operational discipline. The work addressed message match, hierarchy, proof, calls to action, form friction and the relationship between campaign promise and page experience. The work was reviewed through the lens of conversion, so decisions could be made with context rather than by chasing an isolated channel metric. This helped preserve the customer experience while improving the organisation's ability to execute, learn and adapt.

This move also created a reusable lesson. Demand-capture actions The result should be interpreted as evidence of the system working, not as proof that one tactic alone created every business outcome. That distinction makes the story more credible for senior readers and gives future teams a clearer way to reproduce the useful part of the work.

4. 4. Connect signals to sales

The first move was make website activity commercially useful. Website interactions were treated as part of the demand system and could inform nurture, qualification and sales follow-up. Nikhil's role was to connect the commercial objective with the practical work required to deliver it. That meant making the problem explicit, choosing a workable intervention and ensuring that the team could see what would happen next. In a complex marketing environment, this clarity is valuable because it prevents activity from becoming disconnected from the outcome.

The second part was operational discipline. Website interactions were treated as part of the demand system and could inform nurture, qualification and sales follow-up. The work was reviewed through the lens of learning, so decisions could be made with context rather than by chasing an isolated channel metric. This helped preserve the customer experience while improving the organisation's ability to execute, learn and adapt.

This move also created a reusable lesson. Verified conversion improvement when available The result should be interpreted as evidence of the system working, not as proof that one tactic alone created every business outcome. That distinction makes the story more credible for senior readers and gives future teams a clearer way to reproduce the useful part of the work.

Measurement, attribution and operating discipline

Website measurement requires a defined conversion event, denominator, time period and traffic rule. The documented 45% visibility and 18% revenue figures are practice-level supporting outcomes. A final website case should add conversion or lead metrics only after confirming the source and attribution boundary.

A senior reader should be able to tell which evidence proves execution, which evidence proves engagement and which evidence proves commercial impact. The case therefore keeps metric definitions close to the story. Where the supplied material documents a practice-level or portfolio-level result, the narrative says so. Where a project-specific number is unavailable, the document names the recovery task instead of manufacturing precision.

Business impact and customer-success interpretation

The website became a more active commercial asset: it explained value, supported search discovery, gave campaigns a credible destination, helped buyers self-educate and provided sales with context. That increased the usefulness of the site to internal teams and prospective buyers.

For senior leaders, the lesson is that CRO is not a cosmetic redesign. It reduces the distance between a buyer's question and the organisation's ability to answer it with clarity, evidence and a credible next step.

What this case demonstrates to an executive reader

- Website conversion improves when promise, proof and next action align.
- SEO should be connected to buyer journeys and commercial intent.
- A website can support revenue without owning all revenue attribution.
- Measurement boundaries increase executive trust.
